# POLYKEG PRO 2.0

THE **SAFEST** AND MOST **SUSTAINABLE ONE-WAY** KEG IN THE MARKET

USER MANUAL

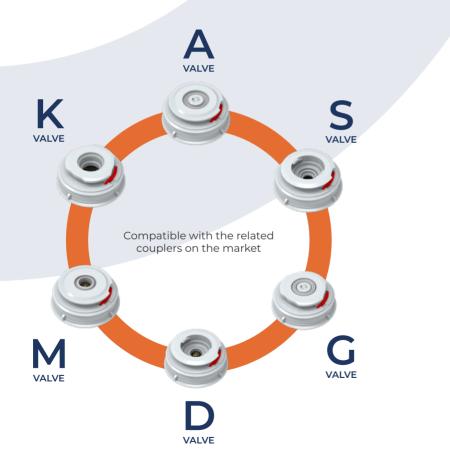

SP03 - Rev. 03 of 05/11/2024

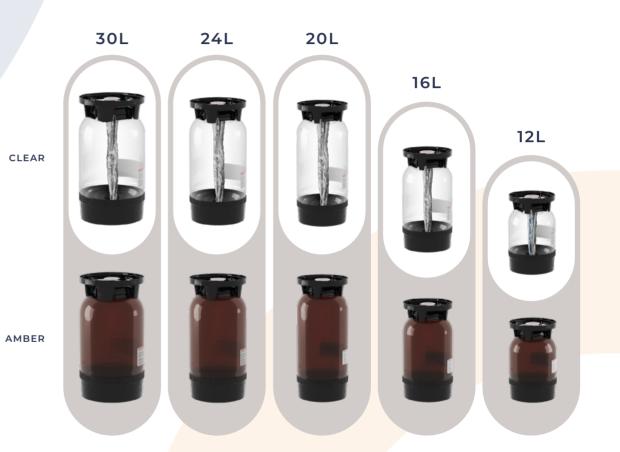

## POLYKEG PRO 2.0 RANGE

PolyKeg PRO 2.0 range is available both with and without bag in **5 different sizes and with 6 different valves** for a full compatibility.

. .

### WITH BAG AND WITHOUT BAG

### POLYKEG PRO 2.0 **EXCLUSIVE ADVANTAGES**

1: Automatic release of overpressure when it exceeds the set value, during the entire keg life cycle. The valve closes automatically once the internal pressure drops below the set value. 2: Complete and quick depressurization of the keg after use, with easy removal of the red lever. ANTI-ROTATION SYSTEM

PolyKeg PRO 2.0's anti - rotation system stops the keg from slipping and rotating on the pallet, ensuring the stability of the goods both in the warehouse and during shipment. It's simple, fast and safe since the key does not need to be oriented during the palletization process.

The innovative design and materials used to make PolyKeg PRO 2.0 lightweight, yet strong and safe, ensure high resistance to internal pressure and handling during transport and storage.

BARRIER

Thanks to the special materials, PolyKeg PRO 2.0 guarantees a high barrier to  $O_2$ ,  $CO_2$  and light keeping the product gualities unchanged over time.

#### **READY FOR FILLING**

Polykeg PRO 2.0 is supplied flushed and pressurized with alimentar nitrogen. Ready for filling (it is intended that verification of residual O<sub>2</sub> content after filling is customer's responsibility.)

SCREW NECK

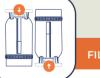

The neck closure has a unique design to ensure automatic pressure relief in case of tampering, and a higher resistance in the unlikely case of valve detachment from the keq.

The tamper evident seal, exclusive of PolyKeg®: > Guarantees the integrity of the keg, showing possible manipulation by third parties. > Protects the valve from external agents and against shocks during the handling.

#### **BAG IN KEG SYSTEM (BIK)**

The unique PolyKeg 'bag in keg' system allows correct and complete tapping of the product, protecting it from external agents thanks to the special multilayer bag. The bag-in-keg is supplied nitrogen-fluxed and vacuum-packed to ensure the best hygienic conditions.

FILLING

PolyKeg PRO 2.0 can be filled either upside down or upside up, manually or with automatic filling machines.

### POLYKEG PRO 2.0 BAG IN KEG SYSTEM

# BAG IN KEG BIK POLYKEG®'S EXCLUSIVE INNOVATION.

> It allows complete and correct tapping, avoiding excessive foam and product waste.

> It guarantees maximum protection of the product, before and during tapping, thanks to the innovative bag design, made with a special multi-layer film that provides a complete barrier to light, O2 and CO2.

> Polykeg PRO 2.0 is supplied flushed and pressurized with food-grade nitrogen. Ready for filling (it is intended that verification of residual O2 content after filling is customer's responsibility). The bag kit is supplied flushed and vacuum sealed to ensure the absence of residual oxygen and excellent sanitary conditions inside the bag.

> It can be filled either upside down or upside up, manually or with automatic filling machines.

3

### POLYKEG PRO 2.0 PRESSURE RELEASE VALVE (OPRV)

### AUTOMATIC OVERPRESSURE RELEASE

When the internal pressure exceeds the set value, throughout the keg life cycle, the OPRV automatically releases the excess pressure and closes again once it falls below the set value.

#### Once the contents have been used up, the keg can be depressurised quickly and safely for proper disposal by breaking the OPRV.

## \*In case of PolyKeg PRO 2.0 with bag, the OPRV valve has a counter-pressure release and depressurisation function at the end of use.

# POLYKEG PRO 2.0 fully sustainable

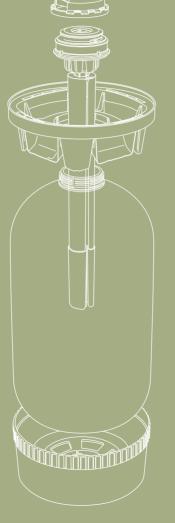

### EASY TO DISASSEMBLE

Thanks to the innovative eco-design, PolyKeg PRO 2.0 can be easily disassembled into various components and materials, everywhere and without using any power.

#### DECENTRALIZATION

PolyKeg® developed a modular and compact production process that allows to decentralize the production of our kegs as close as possible to the target market, and in some cases directly in-house. This innovative solution makes possibile to cut down secondary packaging and improve handling and logistics.

### RAW MATERIAL OPTIMIZATION

PolyKeg PRO 2.0 kegs have been designed to optimize the quantity and type of materials used, avoiding metal components. This is the best solution to optimize the recycling process and the reuse of materials.

#### **RECYCLED MATERIAL**

The Polykeg PRO 2.0 keg is certified by the accredited body "Plastica Seconda Vita" and contains up to 41.7% recycled plastic, depending on the format.

### LOGISTICS

The PolyKeg PRO 2.0 range has been designed to maximize the quantity of kegs per pallet, truck or container, resulting in reduced storage space and costs, handling and transport.
